

# Thought for the Week

## Excellence equals Managing Change at an accelerated rate:

Einstein explained the relationship of mass and energy with the formula  $E = mc^2$ . We can borrow the formula and adapt it to describe what top managers must do to thrive in today's economic and competitive climate. Energy becomes Excellence, Mass becomes the ability to Manage organizational change, and the speed of light becomes the accelerated rate of Change, or Change squared. *Not a scientific formula for physics, but a practical formula for success.*
